

Recovery needs to get reflected in data

Unlimited health care needs

Limited health care resources

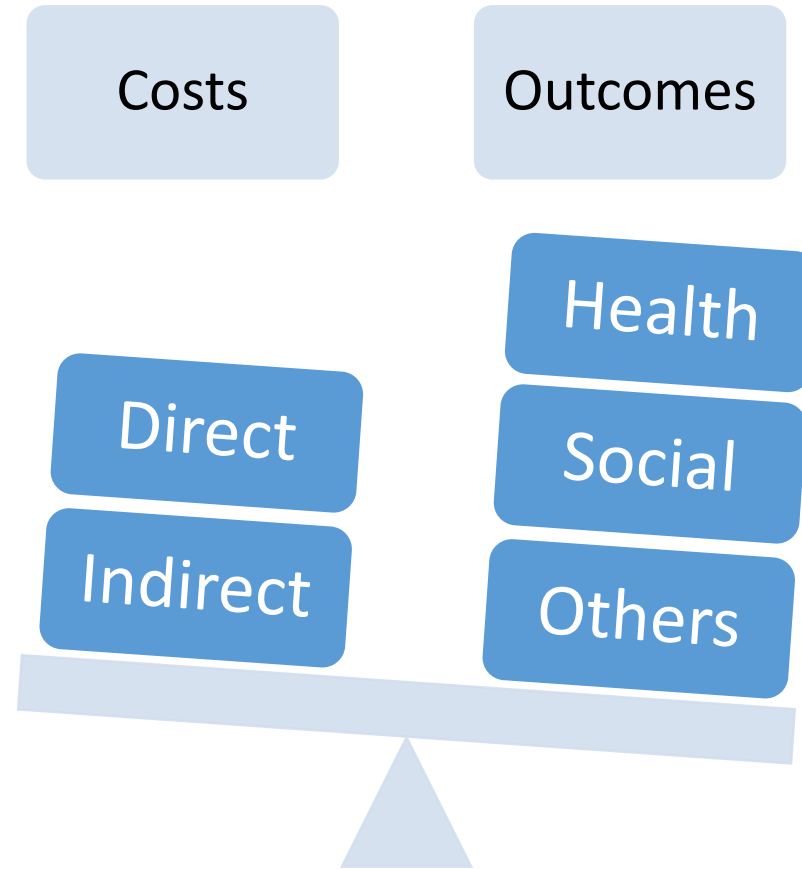

Decisions on allocation need to be made

Decision based on evidence

- Health-care costs
- Social-care costs
- Productivity costs
- Criminal justice
- Informal care
- Private costs
- ...

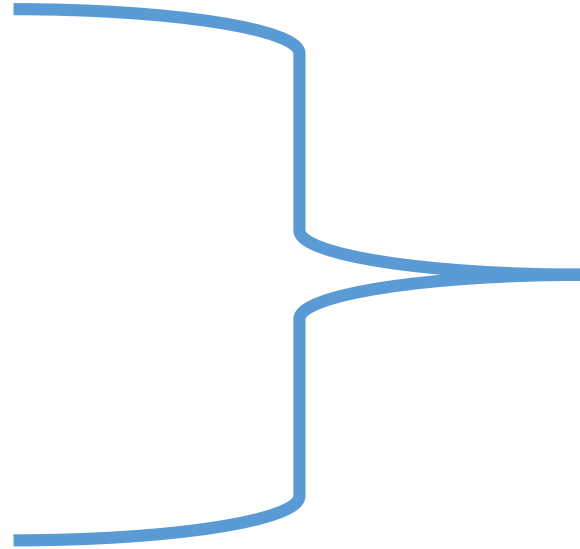

- Psychopathology - symptoms
- Disability
- Global and social functioning
- Needs
- Quality of life
- Health related quality of life – QALYs
- Satisfaction with services
- Social contact
- Sebe-stigmatization
- Consequences for families
- **Recovery**
- ...

Consensus needs to be made on what costs and outcomes will be measured and how!

What if we do not base our decisions on evidence?

Based on:

- **Historicity**
- **Ideology**
- **Impressions and gossips**
- **Friendships**
- **Media attention**
- **Public pressure**
- **Corruption**

Recovery needs to get reflected in data!
